## November 2005

Published\_Applications Nucleic Acid and Published\_Applications Amino Acid database searches now generate two sets of results each. The Published\_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published\_Applications\_New databases: older published applications make up the Published\_Applications\_Main databases.

Searches run against Nucleic Acid Published\_Applications produce two sets of results, with the extensions .rnpbm (Published\_Applications\_NA\_New).

Searches run against Amino Acid Published\_Applications produce two sets of results, with the extensions \rapbm (Published\_Applications\_AA\_New).

                                                                                                                                                                                                                                                                                ò
                                                                                                                        This is the nucleotide sequence of the probe used in the to isolate the humam alpha-galactosidase A gene (alpha-gal A), used in the method of the invention, which involves the production of genetically modified human cells that express alpha-galactosidase. The cultured human cells can be used for the production of glycosylated human alpha-gal A and can be used for the treatment of patients with an alpha-gal A deficiency, e.g. Fabry disease (an X-linked inherited lysosomal storage disease)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pure human alpha-Gal A preparation for treating alpha-galactosidase A deficiency associated disorders e.g. Fabry's disease, cardiovascular abnormality, has various alpha-Gal A glycoforms and is free of lectins.
                                               Treatment of alpha-galactosidase A deficiency in, e.g. Fabry disease comprises use of genetically modified human cells that express alpha-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleotide sequence of a probe from exon 7 of human alpha-Gal A gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, alpha-galactosidase A; alpha-Gal A; lysosomal glycohydrolase;

The present sequence represents a probe derived from exon 7 of the human

```
alpha-galactosidase A (alpha-Gal A) gene. Alpha-Gal A is lysosomal glycohydrolase which cleaves the terminal alpha-galactosyl moieties of various glycochjugates. The protein is useful for preparing a medicament for treating alpha-Gal A deficiency associated disorders, e.g. typical variant of Rabry's disease, cardiovascular abnormality, preferably left entricular hypertrophy (LVH). Alpha-Gal A produced by the invention has an extended circulating half-life and increased uptake in specific tissues other than live, compared with alpha-Gal A produced by other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to the treatment of a patient having an alphagalactosidase A (aGA) deficiency, e.g. Fabry disease, by using cells overexpressing and secreting aGA or purified aGA. This sequence represents a 270 bp fragment of the human aGA exon 7 sequence for use as a probe to isolate the complete aGA gene sequence (AAA70685). The probe was amplified by the primers AAA70679-A70680. For expression and secretion of the protein is fused to a signal peptide especially the human growth hormone (hGH) signal peptide. Primary, secondary, or immortalised human cells genetically modified to overexpress human aGA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New DNA comprising a human growth hormone signal peptide and human alphagalactosidase A polypeptide and cells expressing the DNA, useful for treating Fabry disease and in vitro protein production for enzyme

are also useful for in vitro protein production, to produce protein which may be purified for enzyme replacement therapy. The method allows the production of large quantities of appropriately glycosylated and therapeutically useful human aGA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of purifying human alpha-galactosidase A (alpha-gal A) from a human cell. The method involves a chromatography step which comprises passing human alpha-gal A containing sample over a hydrophobic interaction resin. The method is useful for purifying alphagal A from a human cell, for use in treating an individual suspected of having alpha-gal A deficiency such as Fabry disease. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Purifying human alpha-galactosidase A from a cell for use in treating Fabry disease, by passing sample containing the enzyme over hydrophobic interaction resin, heparin resin, hydroxyapatite and anion exchange
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; alpha-galactosidase A; alpha-gal A deficiency; Fabry disease;

The present invention relates to the isolation of highly purified human alpha-galactosidase A (alpha-Gal A) glycoprotein, and preparations containing alpha-Gal A, where greater than 50% of the total glycans of the preparation are complex-type glycans, produced by providing a human cell genetically modified to express alpha-Gal A polypeptide, and purifying the polypeptide from the human cell or its culture medium. The alpha-Gal A preparations are useful for the treatment of alpha-caphacial A preparations of Pabry patients with predominantly cardiovascular abnormalities such as ventricular enlargement (e.g. left ventricular chypertrophy and/or mitral valve insufficiency), or Fabry patients with predominantly renal involvement. The alpha-Gal A preparations have extended circulating half-life in mammalian hosts, as improved sightification of alpha-Gal A preparations enhances the circulatory half-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    complex-
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, alpha-galactosidase A glycoprotein, alpha-Gal A; glycan, complex-type glycan, alpha-galactosidase A deficiency; Fabry's disease; cardiovascular abnormality; ventricular enlargement, left ventricular hypertrophy; mitral valve insufficiency; renal abnormality; sialylation; nephrotropic; probe; ss.
                                                                                                                                                                                                                         Human alpha-galactosidase A glycoprotein preparation containing cor
type glycans, useful for treating alpha-galactosidase A deficiency,
especially Fabry's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                       Probe for cDNA encoding human alpha-galactosidase A glycoprotein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treco DA, Williams MD;

The invention is useful for treating disorders associated with alpha-galactosidase A deficiency and sphingolipid degradation such as Gaucher's disease and Fabry disease. The invention is also useful in gene therapy. The present sequence is a 210 bp probe used to isolate human alpha-gal A

The invention relates to a composition comprising a human alphagalactosidase A (alpha-Gal A) preparation, purified to at least 98% monogeneity, as measured by sodium dodecyl sulphate polyacrylamide gelectrophoresis (SDS-PAGE) or reverse phase HPLC, where the human alphaelectrophoresis (SDS-PAGE) or reverse phase HPLC, where the human alphaunits/mg protein. The invention is useful in enzyme therapy. The invention is useful in retaring a patient with Fabry disease, or for treating a patient with an arypical variant of Fabry disease (e.g. cardiovascular abnormality such as left ventricular hypertrophy), where

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method of treatment which comprises identifying a patient suspected of having an alpha-galactosidase A deficiency, and introducing into the patient a human cell genetically modified to overexpress and secrete human alpha-gal A. The invention is useful in gene therapy. The methods and compositions of the present invention are useful for treating disorders with alpha-galactosidase deficiency, such as Fabry disease. The present sequence is a probe used
 the alpha-Gal A preparation is administered to the patient in a dose between 0.05-5 mg of alpha-Gal A preparation per kg body weight weekly biweekly. The present sequence is a probe from human alpha-Gal A gene

The present invention provides highly purified alpha-galactosidase A (alpha-Gal A) and various methods for purifying it; alpha-Gal A preparations with altered charge and methods for making those preparations alpha-Gal A preparations that have an extended circulating half-life in a mammalian host and methods for making the same; and methods and dosages for administering an alpha-Gal preparation to a subject. The alpha-Gal A preparation of the invention is useful for treating a patient with Fabry disease, or atypical variants of Fabry disease e.g. cardiovascular abnormality such as ventricular enlargement e.g. left ventricular hypertrophy (LVH) and/or mitral valve insufficiency or Fabry patients with predominantly renal involvement. The present sequence is a probe used to isolate human alpha-Gal A CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Composition useful for treating Fabry disease or atypical variant of Fabry disease comprising a human alpha-galactosidase A preparation, purified to at least 98 percent homogeneity.
                                                                                                                                                                                                                                                                                           ACTICAAGGITAAGAAGICACATAAATCCCACAGGCACTGTTTTGCTTCAGCTA 208

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The cDNA sequence (AAQ66241) of human alpha-galactosidase A (alpha-Gal A) was determined. A fusion protein of alpha-Gal A cDNA and protein A 1gG binding domain E (AAQ66242, AAR5371) was expressed in COS-1 cells. The alpha-Gal A cDNA was amplified by PCR using primers (AAQ66243-44) designed to delete the termination codon, to add a 3' collagenase consensus sequence and to include a 5' EcoRI recognition site. The protein A domain E was amplified with the collagenase consensus sequence in the 5' oligonucleotide using the primers given in AAQ66245-6f. The enzyme can be used for Pabry disease enzyme replacement therapy, to convert blood group B to 0, or to hydrolyze alpha-D-galactosyl residues from glycoconjugates. This sequence encodes a variant human alpha-galactosidase A (alpha-Gal-A) which has a C-terminal truncation of 12 amino acids. Alpha-Gal A or its variant, which has a carboxy-terminal deletion of 2-11 amino acids and which exhibits alpha-galactosidase A enzyme activity, is useful for treating Fabry disease or a condition associated with a deficiency of alpha-galactosidase A Fabry disease has been linked to an insertion of an adenine nucleotide at nt 1095 in exon 7 of the alpha-Gal A coding sequence, which results in a tyrosine-to-stop codon substitution at amino acid residue 365 (Y365X), causing a C-terminal truncation by 65 residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New alpha-galactosidase A polypeptide, useful for treating Fabry disease in humans or for treating a condition associated with a deficiency of alpha-galactosidase A.
                                                                                                                                                                                                                                                                                                                                                                                                                                Wild type; human; alpha-galactosidase A; alpha-Gal-A; variant; deletion; Fabry disease; C-terminal truncation; 8s.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence encodes a variant human alpha-galactosidase A (alpha-Gal-A) which has a C-terminal truncation of 11 amino acids. Alpha-Gal A or its variant, which has a carboxy-terminal deletion of 2-11 amino acids and which exhibits alpha-galactosidase A enzyme activity, is useful for treating Fabry disease or a condition associated with a deficiency of alpha-galactosidase A. Fabry disease has been linked to an insertion of an adenine nucleotide at nt 1095 in exon 7 of the alpha-Gal A coding sequence, which results in a tyrosine-to-stop codon substitution at amino acid residue 365 (X365X), causing a C-terminal truncation by 65 residues
                                                                                                                                                          Wild type; human; alpha-galactosidase A; alpha-Gal-A; variant; deletion;
Fabry disease; C-terminal truncation; ss.

```
This sequence encodes a variant human alpha-galactosidase A (alpha-Gal-A) which has a C-terminal truncation of 10 amino acids. Alpha-Gal A or its variant, which has a carboxy-terminal deletion of 2-11 amino acids and which exhibits alpha-galactosidase A enzyme activity, is useful for treating Fabry disease or a condition associated with a deficiency of alpha-galactosidase A Fabry disease has been linked to an insertion of an adenine nucleotide at nt 1095 in exon 7 of the alpha-Gal A coding sequence, which results in a tyrosine-to-stop codon substitution at amino acid residue 365 (1365X), causing a C-terminal truncation by 65 residues
New alpha-galactosidase A polypeptide, useful for treating Fabry disease in humans or for treating a condition associated with a deficiency of alpha-galactosidase A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Wild type; human; alpha-galactosidase A; alpha-Gal-A; variant; deletion;

                                                                                                                                                                         This sequence encodes a variant human alpha-galactosidase A (alpha-Gal-A) which has a C-terminal truncation of 9 amino acids. Alpha-Gal A or its variant, which has a carboxy-terminal deletion of 2-11 amino acids and which exhibits alpha-galactosidase A enzyme activity, is useful for treating Fabry disease or a condition associated with a deficiency of alpha-galactosidase A. Fabry disease has been linked to an insertion of an adenine nucleotide at nt 1095 in exxon 7 of the alpha-Gal A coding sequence, which results in a tyrosine-to-stop codon substitution at amino acid residue 365 (Y365X), causing a C-terminal truncation by 65 residues
                                                                                                       New alpha-galactosidase A polypeptide, useful for treating Fabry disease in humans or for treating a condition associated with a deficiency of alpha-galactosidase A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wild type; human; alpha-galactosidase A; alpha-Gal-A; variant; deletion; Fabry disease; C-terminal truncation; 88.

```
This sequence encodes a variant human alpha-galactosidase A (alpha-Gal-A) which has a C-terminal truncation of 8 amino acids. Alpha-Gal A or its variant, which has a carboxy-terminal deletion of 2-11 amino acids and which exhibits alpha-galactosidase A enzyme activity, is useful for treating Fabry disease or a condition associated with a deficiency of alpha-galactosidase A Fabry disease has been linked to an insertion of an adenine nucleotide at nt 1095 in exon 7 of the alpha-Gal A coding sequence, which results in a tyrosine-to-stop codon substitution at amino acid residue 365 (1365X), causing a C-terminal truncation by 65 residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1170 BP; 306 A; 260 C; 303 G; 301 T; 0 U; 0 Other;

NCI CGAP FT2 is a subtracted cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages
challenged with different treatments. The mRNA samples were a mixture of these conditions (times refer to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryotta; Butheria; Euteleostomi; Mammalia; Butheria; Euteleostomi; Mammalia; Butheria; Buarchontoglires; Primates; Catarrhini; Hominidae; Homo.

was prepared from 12 pooled bulk tumor samples and primed
with a Not I - oligo(dT) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI sites of the
modified pT7T3 vector. Library went through one round of
normalization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AA287599 197 CGAP GCB1 Homo sapiens cDNA clone IMAGE:700989 3' similar to gb:X14448_rnal ALPHA-GALACTOSIDASE A PRECURSOR (HUMAN);

Plasmid DNA from the normalized library NCI CGAP Kid5 was prepared, and se circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive purification reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1333912-1325811, 1471368-1472903 and 1492104-1492255). Subtraction by Bento Soares and M. Patima Bonaldo.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 19,

Barent No. 5580757

GENERAL INFORMATION:
APPLICANT: Desnick, Robert J.
APPLICANT: Bishop, David F.
APPLICANT: Ioannou, Yiannis A.
TITLE OF INVENTION: Cloning and Expression of Biologically
TITLE OF INVENTION: Active alpha-Galactosidase A
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER READABLE FORM:

Sequence 51, Application US/09176666

Patent No. 6210666

GRERAL INFORMATION:

APPLICANT: Miyamura. No. 6210666uhiro

TITLE OF INVENTION: TRUNCATED alpha-GALACTOSIDASE A TO TREAT

TITLE OF INVENTION: FABRY DISEASE

FILE REFERENCE: 10.018031

CURRENT APPLICATION NUMBER: US/09/176,666

CURRENT PILING DATE: 1998-10-21

EARLIER PILING DATE: 1998-10-21

SARLIER PILING DATE: 1999-10-21

NUMBER OF SEQ ID NOS: 54

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 51

LENGTH: 1164

TYPE: DNA

ORGANISM: Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

APPLICANT: Poril, Andrea Azcarate

TITLE OF INVENTION: Nucleic Acid Sequences Encoding

TITLE OF INVENTION: Stress-Related Proteins and Uses Therefore

FILE REFERENCE: 5051-694

CURRENT FILING DATE: 2005-03-07

PRIOR PILING DATE: 2004-03-08

NUMBER: OF SEQ ID NOS: 381

SQOTWARE: FastSEQ for Windows Version 4.0

SQOTWARE: Language Acid Acid Sequences Encoding

                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence Seq

i Sequence 9, Application US/09626127

i Patent No. 68466968

j GENERAL INFORMATION:

APPLICANT: Garger, Stephen J.

APPLICANT: Turpen, Thomas H.

APPLICANT: Kumagai, Monto

ITLE OF INVENTION: Production of lysosomal enzymes in plants by transient expression

TILE REFERENCE: 00801.0087.CPUS04

CURRENT FILING DATE: 12000-07-26

PRIOR APPLICATION NUMBER: 09/626,127

CURRENT PILING DATE: 1995-09-14

PRIOR FILING DATE: 1995-09-14

PRIOR FILING DATE: 1998-03-21

NUMBER OF SEQ ID NOS: 18

SOFTWARE: PatentIn version 3.1
